Sulzer Metco

E·FILL™ Surface Control

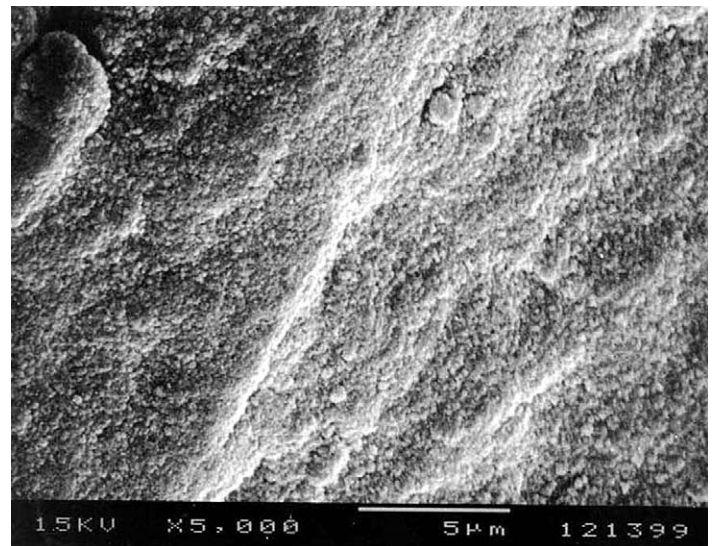

Sulzer Metco Canada has the ability to control the surface area of individual particles. Sulzer Metco Canada's proprietary surface control technology enables you to realize significant cost reductions while maintaining top material

performance. With Sulzer Metco Canada's high level of material control, you can have confidence in our ability to supply you with materials that will meet your end product and in-process workability requirements.

An Illustration of Sulzer Metco Canada's Surface Control Capabilities:

Material: 50 µm 75% Nickel / Graphite 25% (single particle)
Surface Area: 1.28 m²/g
Original Magnification: 5000X

Material: 50 µm 75% Nickel / Graphite 25% (single particle)
Surface Area: 0.19 m²/g
Original Magnification: 5000X
